The disclosure is objected to because of the following informalities: In the specification on page 12 lines 30 and 31 "204 partially shown in Fig. 2", on page 13 lines 14 and 15 "The construction...in Fig. 3.", and in lines 21 and 22 "in a second set of tubes", on page 14 lines 11 and 12 "carrier air 218...coil arrangement 216", and on page 22 line 33 through page 23 line 1 "contaminated gas phase 206...coil arrangement 216" appear to be erroneous. Clarification and/or correction are required.

Claims 1-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claims 1, 14, and 22 "low energy, high vacuum environment" is vague and indefinite because it is unclear how this term further limits the claims. In claim 7 "said carrier air exiting from said condenser module" and in claim 20 "second carbon stage polisher" and "said liquid discharge monitoring module" lack clear antecedent basis. Claim 13 is considered incomplete because it is essential to the instant system that micron filtration bank module receive filtered contaminated fluid from said pre-filtering module and block or filter particles from said filtered contaminated fluid. Claims 2-6, 8-12, 15-19, 21, 23, and 24 depend from the above claims.

Claims 1, 14, and 22 properly written to overcome the above 35 USC 112 rejection would be allowable.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
